1 Introduction

X-Lite is a softphone from CounterPath that enables you to make VoIP voice and video calls, send and receive instant messages, share online status (presence) information, and exchange files. X-Lite implements SIP-based standards for phone calls, IM and presence, allowing you to work with different VoIP service providers.

Standard Telephone Features

The CounterPath X-Lite *for Mac* softphone has all standard telephone features, including:

- Call display and Message Waiting Indicator (MWI).
- Speakerphone and Mute.
- Redial, Hold, Do Not Disturb.
- Call history – list of received, missed, and dialed calls.
- Three-party audio conferencing.
- Three-party video conferencing.

Enhanced Features and Functions

X-Lite also supports the following features and functions:

- Video
- IM and presence using the SIP SIMPLE protocol
- Contact list containing the individual user's contacts
- Acoustic echo cancellation, automatic gain control, voice activity detection.
- Support for DTMF (RFC 2833 or inband DTMF).
- Support for the following audio codecs:
G.711aLaw, G.711uLaw, G.722, OPUS, Speex, Speex Wideband.
- Support for the following video codecs:
H.263, H.263+ 1998.
- Compliance to 3261 SIP standard.
- Support for these firewall traversal solutions: STUN, TURN, or ICE.

2 Installation and Setup

2.1 Getting Ready

Account Information

After choosing a VoIP service provider, you will need the following information:

- User name and domain. For example, 1331@domainA.com
- Password
- Authorization Name (if applicable)
- Firewall traversal and other network information; see “Configuring X-Lite” on page 29.

2.2 Configuring X-Lite

Setting up Notifications

X-Lite uses OS notifications. Make sure that the notifications are set up for X-Lite in system preferences. From the menu, click Apple logo > System Preferences > Notifications. In the notification center, choose X-Lite. Choose Banner or Alerts for the alert style. For details on incoming call notifications, see page 15.

Setting up Accounts

After obtaining SIP account information from your VoIP service provider, you can set up X-Lite accounts.

1. From the menu bar, choose X-Lite > Preferences > Accounts. The Account list appears with one account (the Mac Address Book account) enabled; see below.
2. Click the + button and choose New SIP Account. The SIP Account window opens.
3. In the General tab, complete the User Details area with the information obtained from your VoIP service provider.
4. Complete the remaining tabs as specified by your service provider or to suit your setup. Settings that you may need to change immediately include:

- General tab, Domain Proxy area.
- Topology tab, if your computer is on a network and/or behind a firewall.

For more information, see page 29.

5. Click OK; the account is enabled and registered; check the account list to make sure the account registers successfully.

The screenshot shows the 'Sip Account - Disabled' window. The 'Account name' is 'Account 1'. Under 'Use for:', both 'Call' and 'IM/Presence' are checked. The 'General' tab is selected, showing the 'User Details' section with the following fields: '* User ID' (1331), '* Domain' (domainA.com), 'Password' (masked with dots), 'Display name' (Joseph Santos), and 'Authorization name' (empty). Below this is the 'Domain Proxy' section with 'Register with domain and receive calls' checked. Under 'Send outbound via:', 'Domain' is selected with a radio button, and 'Proxy' is unselected. The 'Address' field is empty. At the bottom, the 'Dial plan' is '#1|a.T;match=1;prestrip=2;'. 'Cancel' and 'OK' buttons are at the bottom right.

Populating your Contact List

Typically, you will want to create contacts in order to easily make phone calls and send IMs.

You can:

- Add addresses to the Contact list one by one. See page 20.
- During a call that you place or receive, you can add the other party to your contact list. See “Handling an Established Call” on page 12.

For general information on contacts, see page 20.

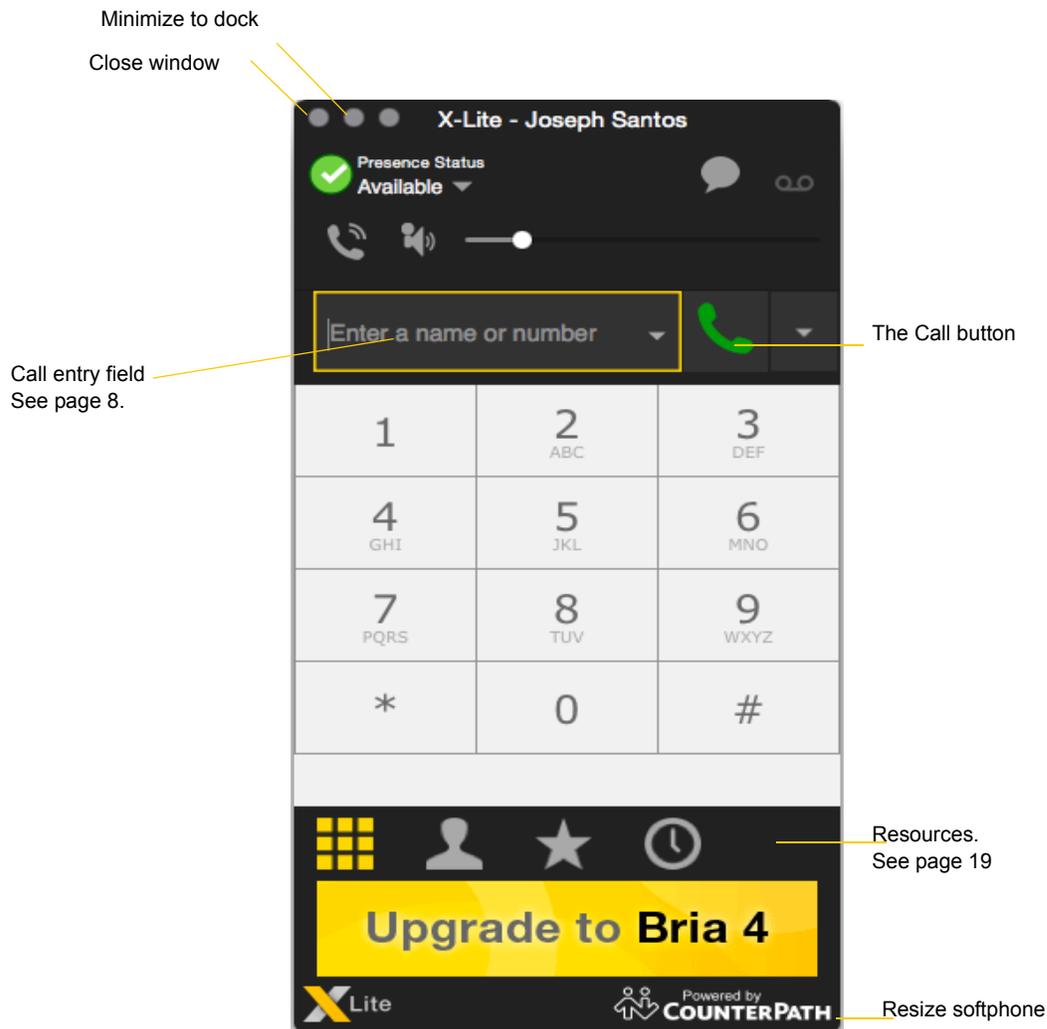

2.3 Troubleshooting

X-Lite includes tools for helping you troubleshoot problems. From the menu, choose Help > Troubleshooting.

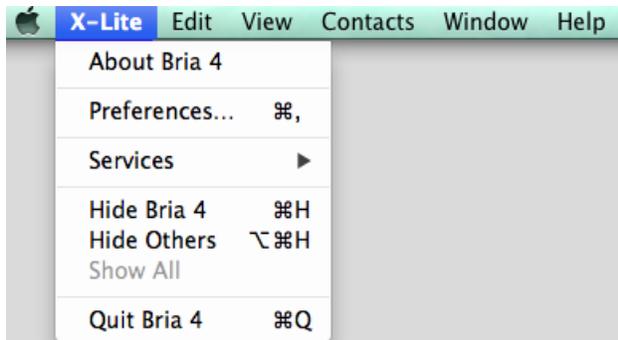

- Audio tab: While you are on a phone call, you can test the quality of the audio. Note that to perform a valid test, you should be on an established call (not a call attempt).
- Video tab: You can verify that your camera is working.
- Devices tab: You can verify that your microphone and speakers are working and can set the volume to a comfortable level without having to actually place a phone call.
- Diagnostics tab: If none of the other tabs help you solve your problem.

3 Making Phone Calls

3.1 The Onscreen Softphone

The X-Lite Menu

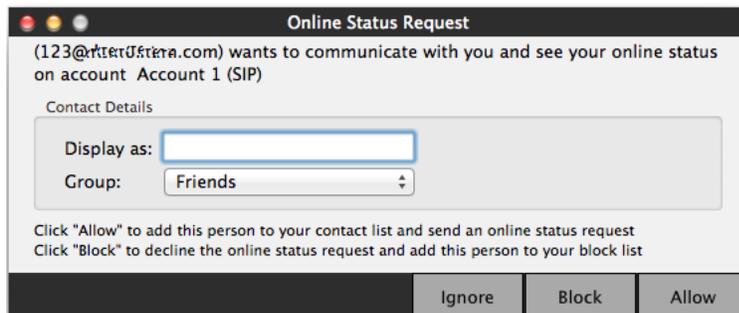

The menu contains the following items that are specific to X-Lite:

- X-Lite > Preferences. See page 38.
- View. Changes how X-Lite looks.
- Contacts. Lets you work with contacts.
- Help. Provides access to various service-related features.

Receiving an Online Status Request

When you start X-Lite, one of the first things you may see (if presence is enabled) is an Online Status Request dialog. See “Sharing Online Status” on page 24.

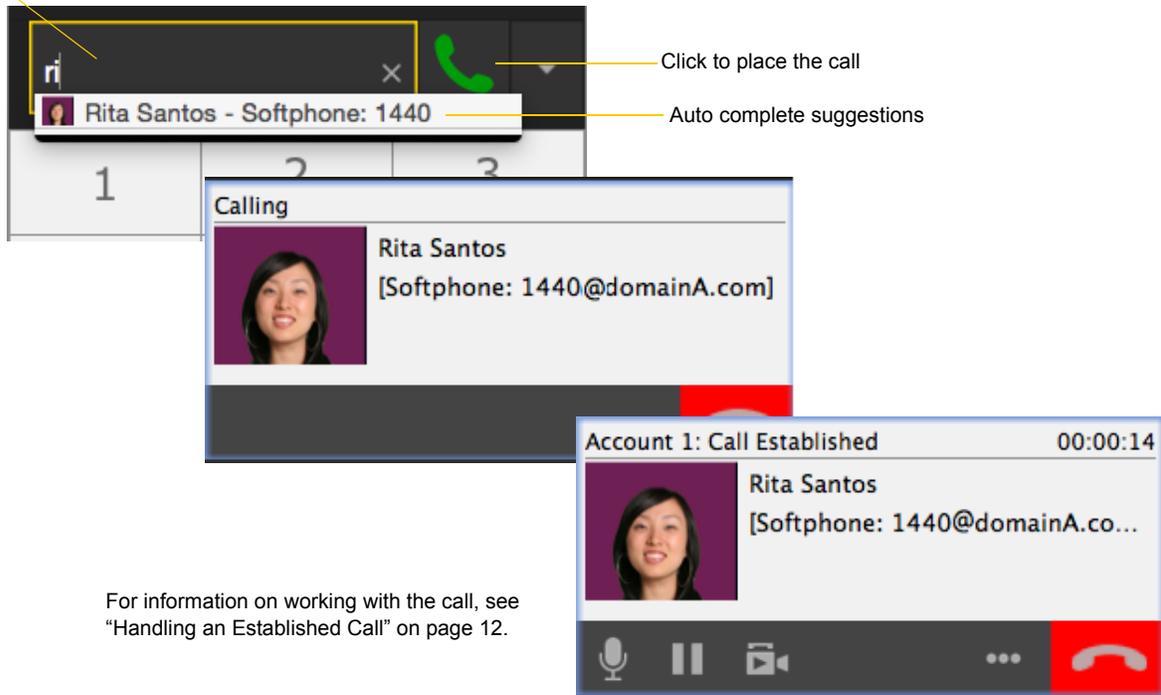

3.2 Placing a Call

Place the call as described in the table below. The outgoing call opens in its own call panel, below any other existing call panels. You will hear a ringing tone while X-Lite attempts to make a connection.

Option	From the...	Description
Keying	Dialpad or computer keyboard	<ol style="list-style-type: none"> 1. Enter the number or address in the call entry field using the dialpad or the computer keyboard. If entering a softphone address, you can enter the entire address (6045551212@domainA.com) or just the number (6045551212). As you type, a suggestion for completing the entry may appear. Choose the suggestion or keep typing. 2. Click the Call button or press Enter.
Control-click a contact or previous call	Contacts or History tab	Control-click an entry from the Contacts or History tab and choose Call or Video Call. (If the tab contains lots of entries, first search or filter the list.)
Double-click a contact	Contacts tab	Contacts have a “double-click” action (page 38) that either makes an audio phone call or starts an IM.
Single-click a contact	Contacts tab	Hover over the right side of the contact to reveal the click-to-call button. Click to place a call using the primary phone number for this contact.
Redial	Redial button	<ul style="list-style-type: none"> • When the call entry field is empty, click the Call button. • Or click the arrow in the call entry field and select a recent call. An audio call is placed.
Dialing	Dialpad	<ol style="list-style-type: none"> 1. If the dialpad is not visible, click the Dialpad tab at the bottom. 2. Click the numbers on the dialpad to enter the phone number. 3. Click the Call button or press Enter.
From an instant message	Messages window	Click the menu at the top of the Messages window and choose Call.

Placing a Call

Type a number or name of a contact in the call entry field.

Dealing with an Auto Attendant

If you know that your call will be answered by an auto attendant and you know what menu items you will choose, you can include those menu items (DTMF) in the phone number when you dial it:

- Before the first DTMF number, include at least one capital P.
- You can include other Ps. Each P causes X-Lite to wait one second before sending the next character.
- At the end of the input, you must include a ; character.

Example: To dial a number, add a 3-second delay and then press 44, enter this in the call entry field:

```
604551212PPP44;
```

Example: To dial a number, add a 6-second delay, then press 1 then 3 then 2, each with a two second delay:

```
604551212PPPPPP1PP3PP2;
```

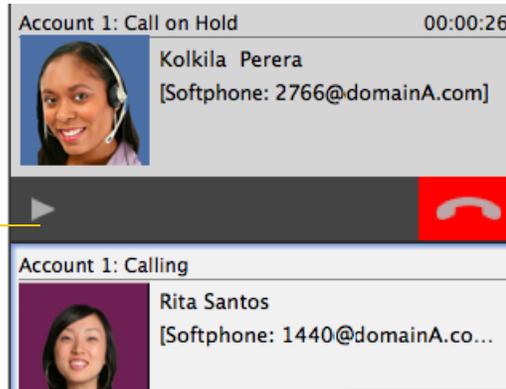

A capital X or , (comma) can be used instead of P. The following will work in the same way as the first example above:

```
604551212XXX44;
```

Placing another Call

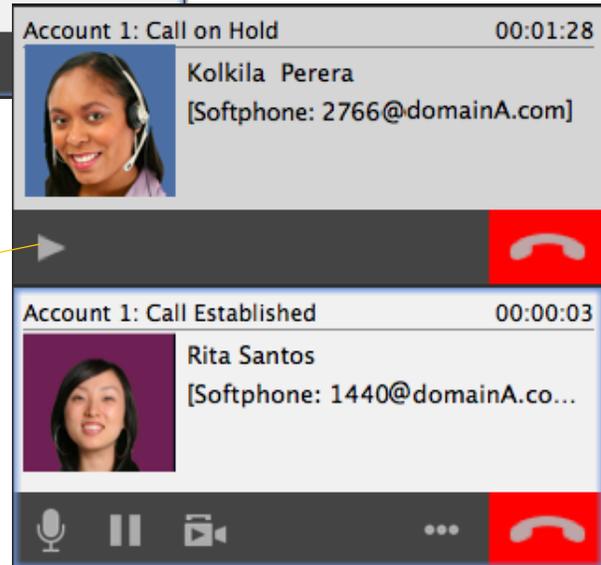

You can place another call. The first call will be put on hold.

Place the call in the usual way

Existing call is automatically put on hold

New outgoing call

Switch between the different calls by clicking Resume on the desired call panel. That call becomes the active call and all other calls are put on hold.

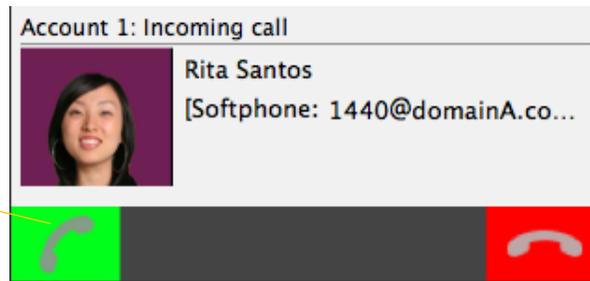

3.3 Handling Incoming Calls

X-Lite must be running to answer incoming calls. (If X-Lite is not running, incoming calls may be directed to voicemail; check with your VoIP service provider.)

When X-Lite is in the foreground, the new call appears in its own call panel. When X-Lite is in the background (the focus is on other application), the incoming call notification appears in the upper-right corner. To receive notifications, make sure that you configured both system preferences on Mac OS (page 4) as well as X-Lite's alerts preferences (page 39).

When X-Lite Is in Foreground

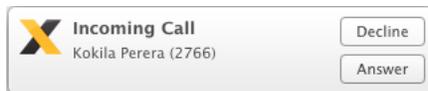

Click. If you are on another call, that first call is automatically put on hold. You are now talking to the new caller.

When X-Lite Is in Background

The Call Alert box appears, even if X-Lite is minimized. For information on call alerts, see page 39.

The Alert style shows buttons

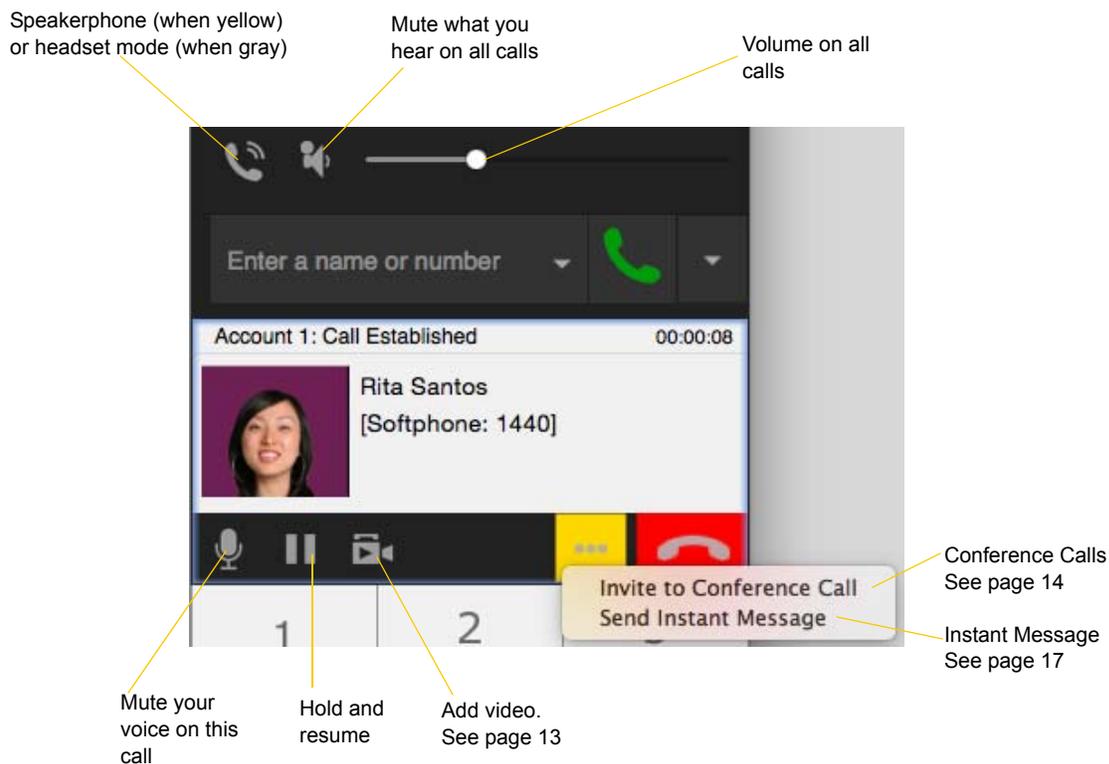

The Banners style goes away automatically. Clicking the banner answers the call

The notifications do not indicate whether the incoming call is an audio or video call. If the incoming call is a video call, X-Lite will answer with video.

3.4 Handling an Established Call

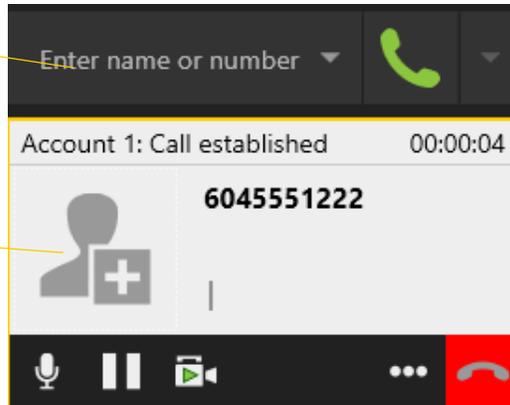

Place another call

The current call is automatically put on hold). See page 10

Add as Contact

If a plus symbol appears here, you can add the current caller as a contact. See "Adding a Contact using an Existing Address" on page 21.

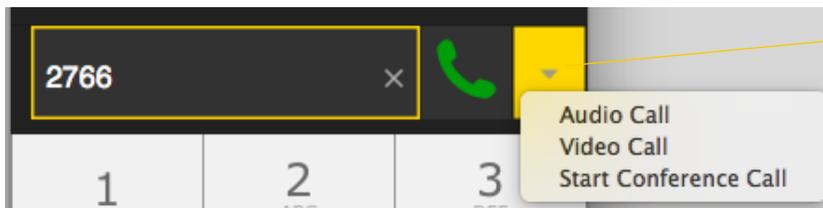

Ending a Call

Click the End call button on the Call panel (the call can be active or on hold). The call panel closes after a few seconds.

3.5 Handling Video Calls

Placing a Video Call

From the Dashboard

Click the down arrow and choose Video call.
If you mostly make video calls, you can Option-click this down arrow to reveal the "Set Video Call as default action" menu item.

Adding Video

If you have a camera, you can click Start Video to add video to an established call. When you add video, the other party may (or may not) start sending their video to you.

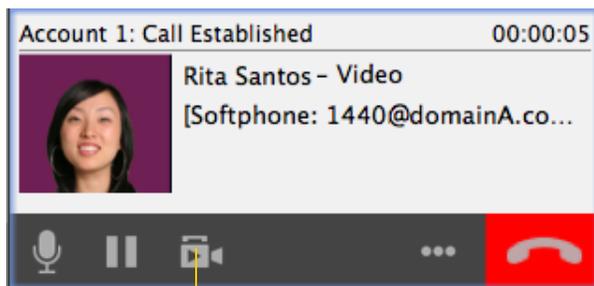

Other Party Adds Video

If the other party starts their video, your video panel automatically opens and the video is played. You can start sending your own video, if desired (and assuming you have a camera) by clicking Start Video on the call panel.

Pausing and Resuming Video

Click Stop Video on the call panel or close the video window to pause sending your video.

Click Start Video to resume sending your video; the video window will open.

Start or stop video

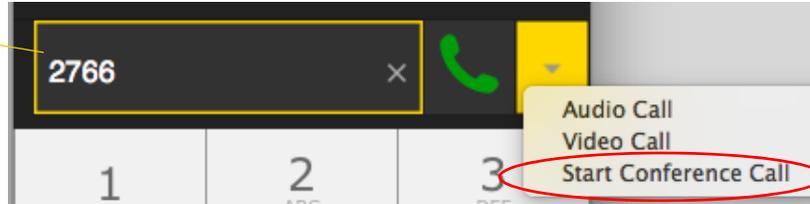

3.6 Conference Calls

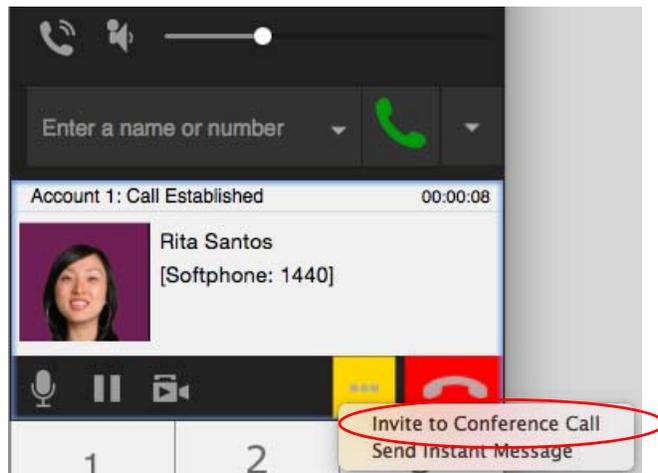

Starting a Conference Call

From the Dashboard

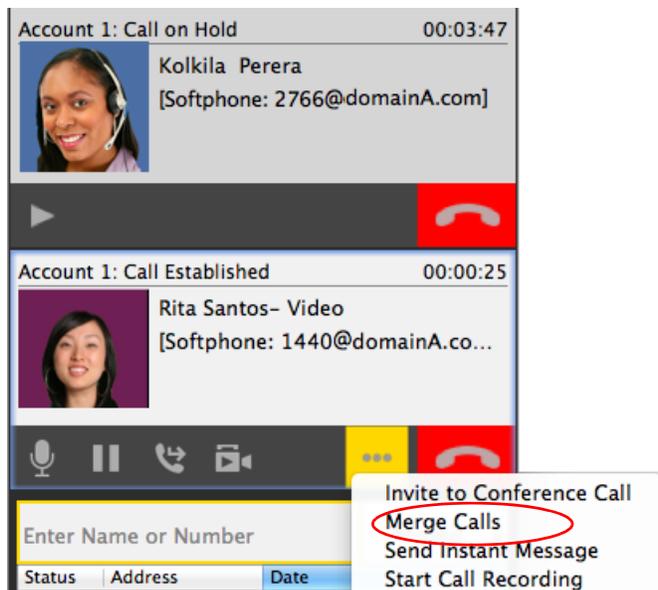

- Enter the number or address by typing
- Or drag a contact or history item
- Or select from the redial list
Then choose Start conference call

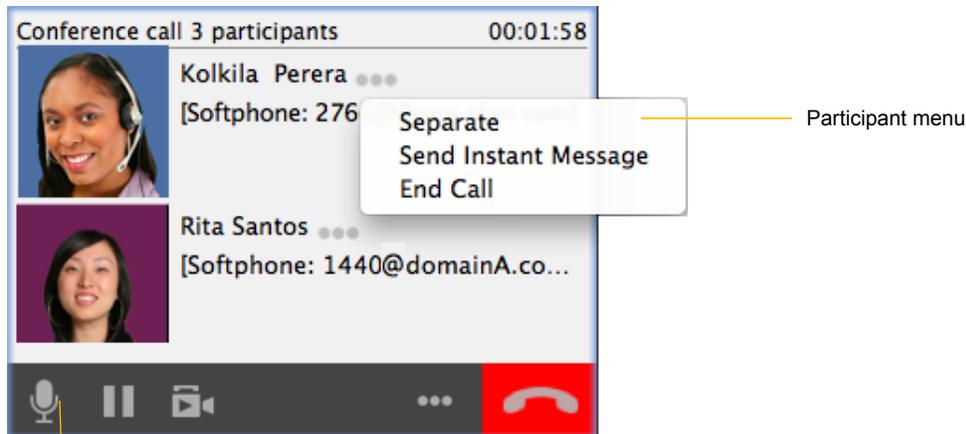

From an Existing Call From One Established Call

From Two Established Call

Managing the Conference

Mute. When you mute during a video call, you may also want to click Stop Video to stop the video feed.

Adding another Participant

If your conference currently has only one participant, you can add the other participant in any of these ways:

- Control-click on a contact and choose Add to Conference Call.
- In the conference call panel, click Invite to Conference Call and then click Add.
- Add in a separate call that is not part of the conference call: In the call panel for the individual call, click the down arrow and choose Merge Calls. This call is added to the conference call.

Send an Instant Message

Click the down arrow beside a participant name and choose Send Instant Message.

Removing a Participant

To remove one call from the conference, click the down arrow beside a participant name and choose Separate. The call becomes a separate call.

Ending the Conference

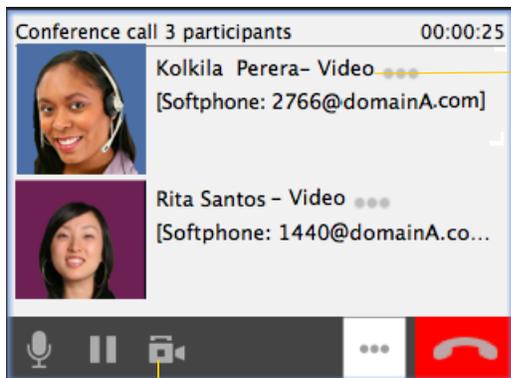

To hang up on everyone, click the End button.

Suspending the Conference

To suspend the conference, click the Hold button. All participants are put on hold.

If you need to speak to one participant separately, put the conference on hold, separate the one participant from the conference, take that person off hold. When done, merge the participant back into the call.

Video Conference Calls

"Video" appears beside each person

Closing the video window stops sending video.

Start and stop sending your video to all participants

Start and stop sending your video to all participants

Starting a Conference with Video

When you start a conference from established calls, video is included if at least one of the calls already includes video. Video is sent to all the participants.

When you start a conference from scratch, video is not included. You can open your video window and choose to add video at any time. Video is sent to all the participants.

How Video Is Shared

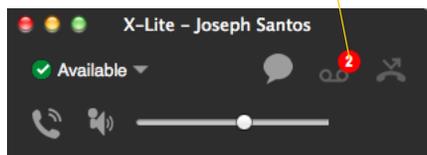

The conference host (the person who starts the conference) serves as the host for other video. Whatever the conference host is receiving will automatically be sent to the other parties.

If the conference host pauses or stops video, other participants will no longer receive video.

3.7 Voicemail

If your service includes voicemail and you have set up voicemail options (page 32), then when you have voicemail messages, the voicemail icon appears at the top of the phone (the icon may include a number). You can click the icon to automatically connect to voicemail and listen to your messages.

Voicemail icon

4 Other X-Lite Features

4.1 Instant Messaging

Sending an IM

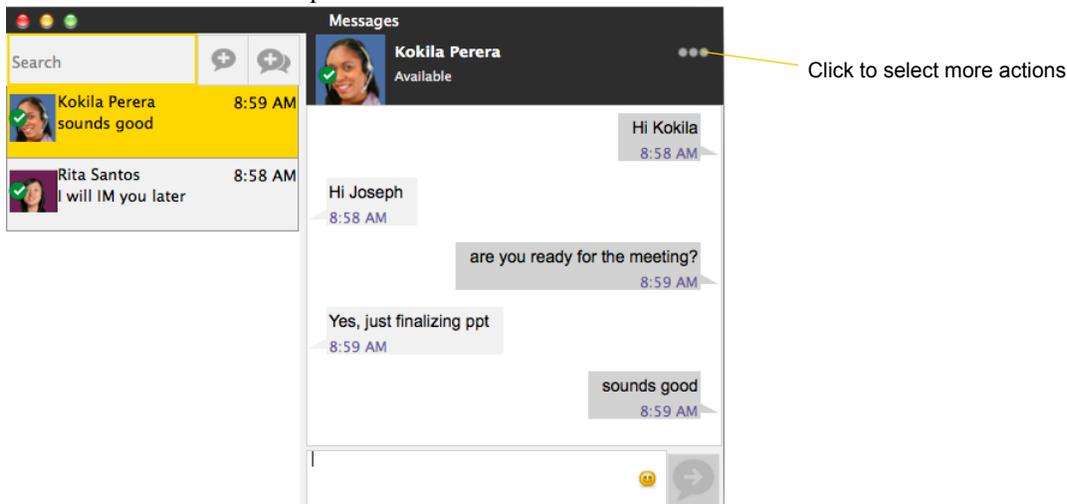

1. You can send an IM to a contact who has a softphone address.

From the Contacts tab	Control-click on the contact and choose Send IM. The contact must have a softphone address. Or click on the IM icon that appears to the right of the contact name.
An active phone call	If the person is a contact, choose Send Instant Message from the call panel menu.
An active conference call	If the participant is a contact, choose Send Instant Message from the participant menu.
From the Messages window	Click the New Conversation icon beside the Search field and type a number or name.

2. Type the message. Include emoticons and formatting (Ctrl+B, Ctrl+I, Ctrl+U), as desired.

To insert a return in the message, press Ctrl+Enter. (You can control the behavior of Enter and of Ctrl+Enter; see page 30.)

3. Click the Send icon or press Enter.

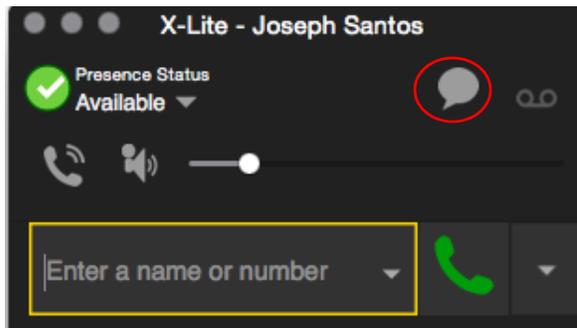

Receiving an IM

When an IM is received, either the Messages window or a notification pops up. (To control which window appears, from the menu choose X-Lite > Preferences > Alerts & Sounds.)

4.2 Viewing Messages

To view your recent IM activity for any contact, perform one of these actions:

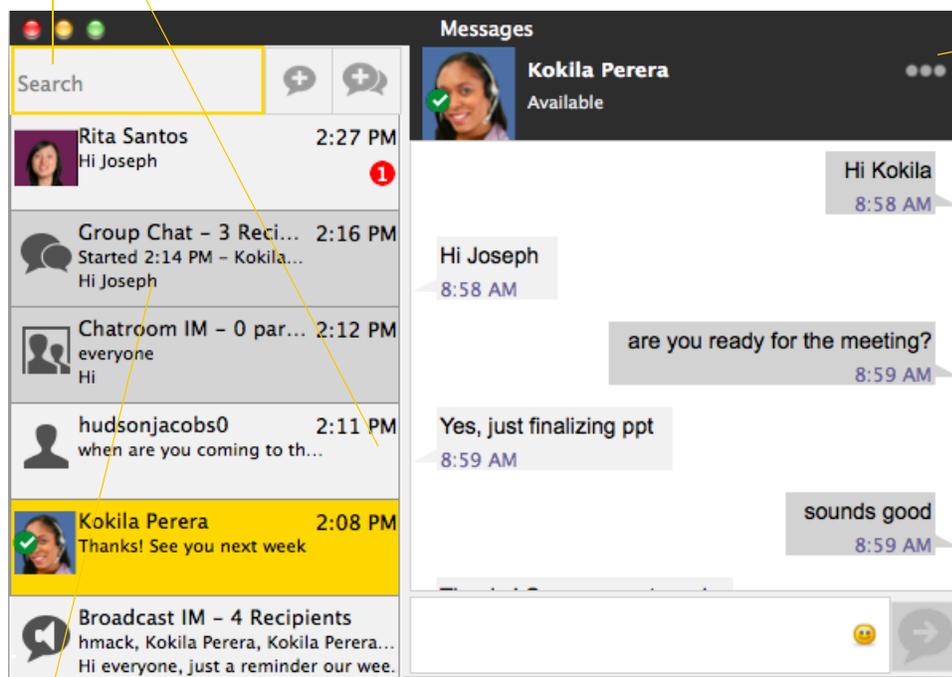

- Click the Messages window icon:

- Press Shift + Command + M.
- On the menu bar, choose View > Show Messages.

Search all messages.

Clicking the x icon deletes the session.

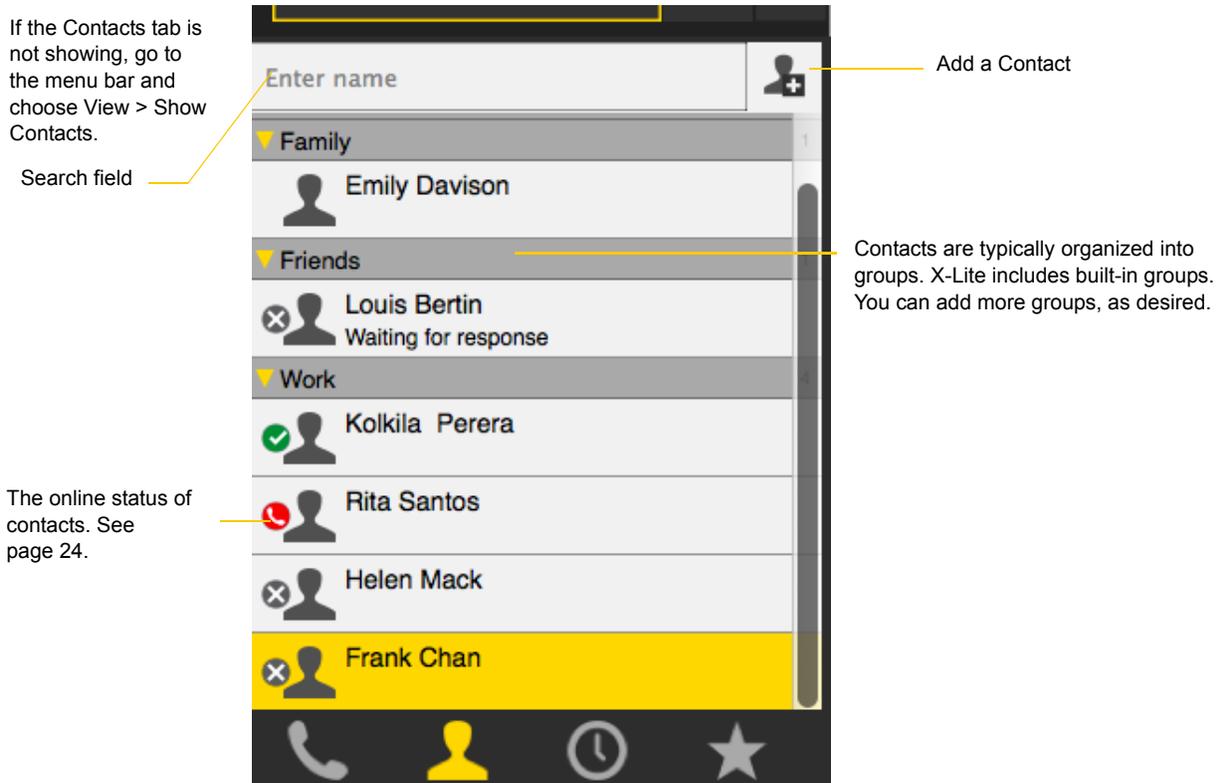

Click for more actions such as exporting conversation.

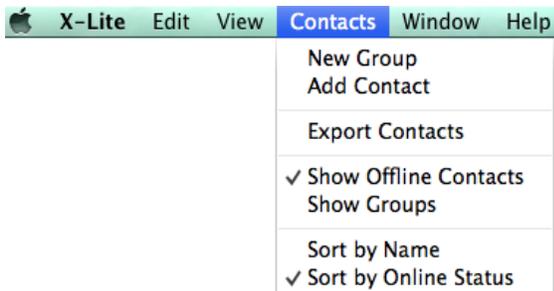

The session may be greyed out. Typically it means that the account used for the session is not registered, or the group chat has ended.

5 The Contacts Tab

The Contacts tab displays your contacts. Each contact is shown with presence information and icons for single-click phoning and IMing.

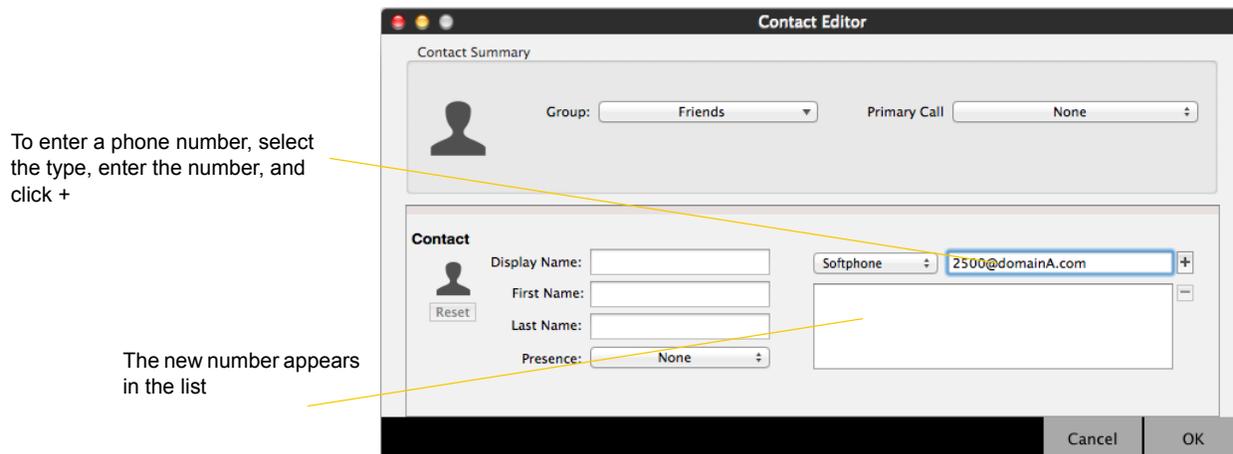

You can change the detail and layout of the contact list: from the menu bar choose Contacts and set the desired options.

5.1 Managing Contacts and Groups

Adding a Contact

Click , or control-click a group and choose Add Contact to Group. The Contact dialog appears.

To enter a phone number, select the type, enter the number, and click +

The new number appears in the list

Field	Description
Contact Summary	
Group	Click to show the list of groups. Check each group this contact should belong to.
Primary Call	If the contact has more than one number, select the primary number. This number will be used with single-click calling.
Primary Presence	This field appears only the contact has more than one Softphone number. The primary presence is used as follows: <ul style="list-style-type: none"> The presence icon on the contact list shows the online status for this address. The single-click action for instant messaging uses this address. You can still send IMs to this person at their other addresses, but you must right-click and choose from the context menu.
Other Sections	
Display Name (required)	The display name for this source of information.
First Name, Last Name	Optional.
Contact Methods	Enter as many contact methods as you want. Enter a person's IM address by choosing Softphone as the type.
Presence	This field is automatically populated when you enter an address in the Softphone or Instant Message field. It indicates that you are sharing online presence information using this address. The address is also shown in the list in the Primary presence field, above.

Example

This example shows how to add a contact when your VoIP service supports online availability via your SIP account.

Enter the person's softphone number in the Softphone field

The screenshot shows the 'Contact Editor' window with the following fields:

- Contact Summary:** Name: Kolkila Perera, Group: Work, Primary Call: None.
- Contact:** Display Name: Kolkila Perera, Softphone: 2766@domainA.com, First Name: (empty), Last Name: (empty), Presence: None.

As soon as you add a Softphone entry, this field automatically appears. X-Lite will share online presence information with this person using this phone number.

In addition, these fields appear. See the table for information on these fields.

The screenshot shows the 'Contact Editor' window with the following fields:

- Contact Summary:** Name: Kolkila Perera, Group: Work, Primary Call: 2766@domainA.com, Primary Presence: 2766@domainA.com.
- Contact:** Display Name: Kolkila Perera, Softphone: Enter number or address here, First Name: (empty), Last Name: (empty), Presence: 2766@domainA.com.

Adding a Contact using an Existing Address

You can add a contact by capturing existing information:

- If you are on a phone call with a person who is not a contact, click the Add to Contacts icon in the call panel.
- On the History tab, select an entry that is not a contact. Control-click and choose Add Contact.

The Contact Profile dialog appears. Complete the dialog as desired and press OK.

If the contact method is Softphone or Instant Message, an online status request is sent to this person. See “Sharing Online Status” on page 24.

Modifying the Contact List

Changing Contact Information

To change the information for a contact, control-click the contact and choose Edit Profile. The Contact dialog appears (see page 20).

Moving or Deleting a Contact

- To drag one or more contacts to a different group, select them and drag to the title bar of the new group.
- To delete one or more contacts, select them, control-click, and choose Delete or Delete Selected Items. The contacts are removed from this group. If a contact belongs to several groups, it is removed from all groups.

Adding, Deleting or Renaming Groups

Select any group, control-click, and choose the appropriate menu item.

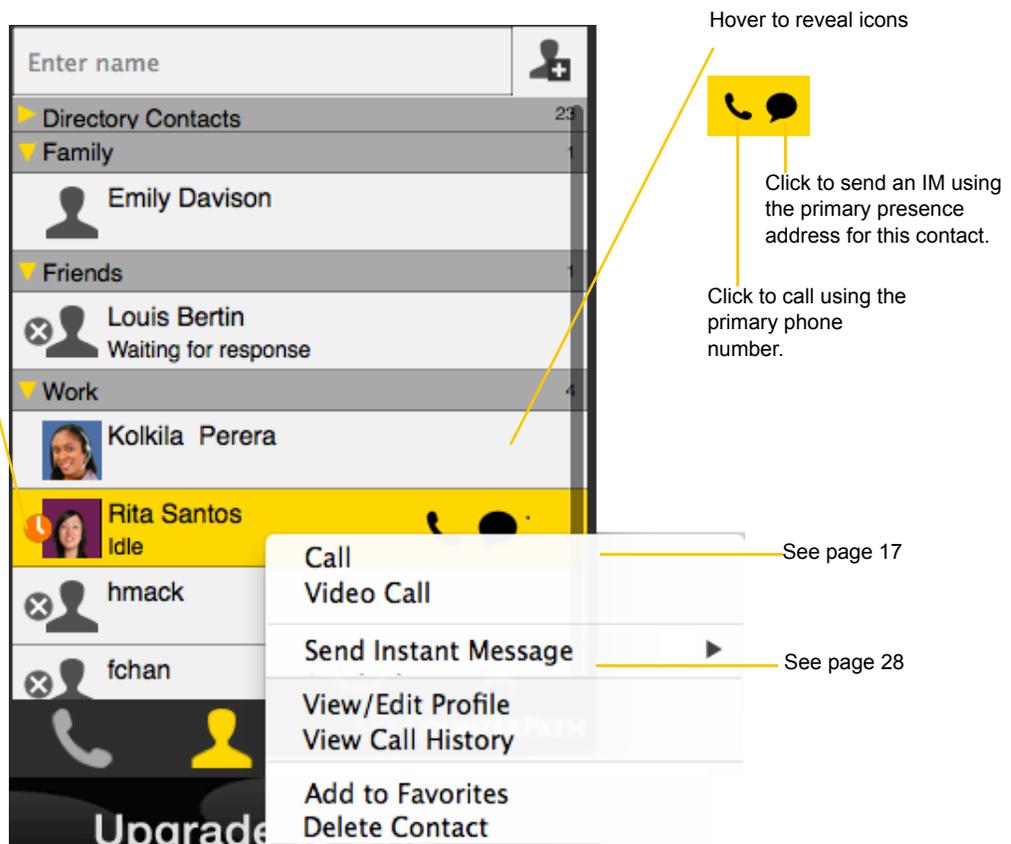

Contacts that have no group appear under “Ungrouped Contacts.” You can delete, but not rename, this group.

5.2 Using Contacts

You can watch the contact's online status, if the contact has a softphone address.

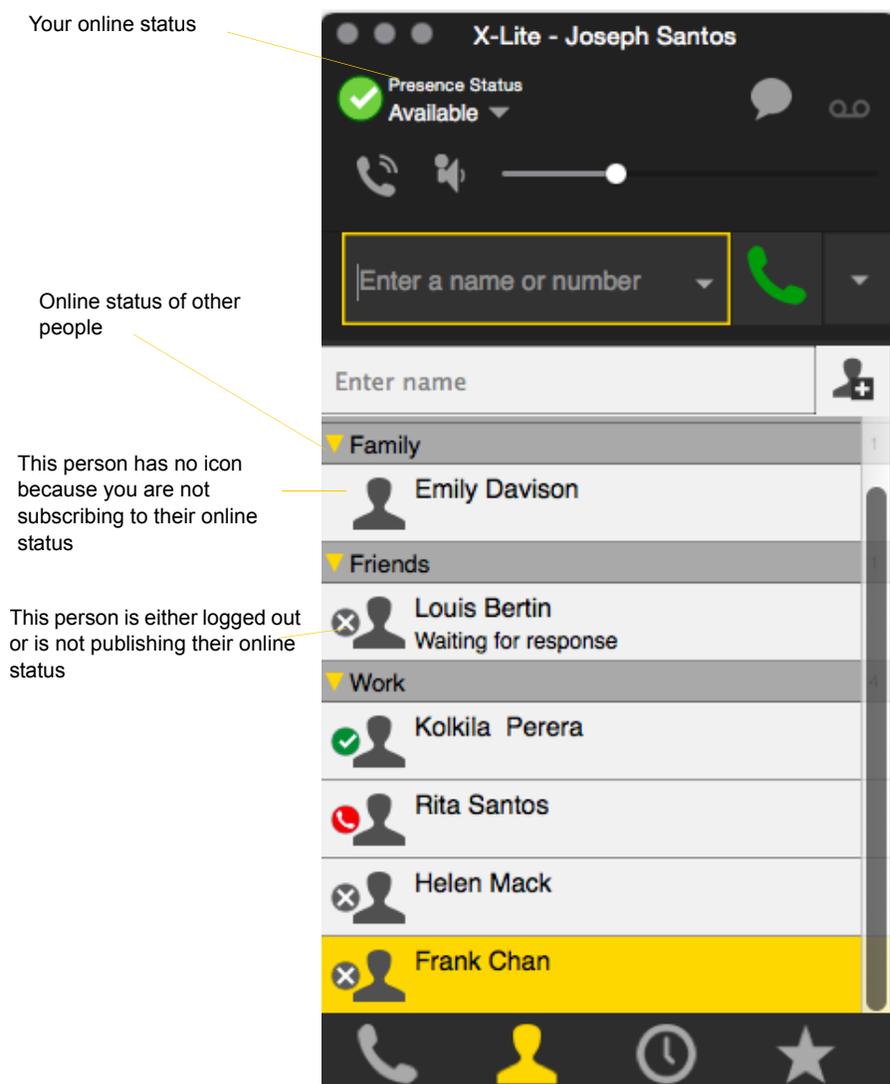

See page 26 for the meaning of the online status icons.

See "Sharing Online Status" on page 24 for information on obtaining online status information.

5.3 Sharing Online Status

You can publish your online status to contacts who have softphone address, and you can set up X-Lite to view the online status of other contacts. Typical online statuses are available, on the phone, busy, and so on.

Sharing Online Status

Watching Others' Status

If a contact has a SIP address in the Softphone field, X-Lite will automatically obtain status information for this address.

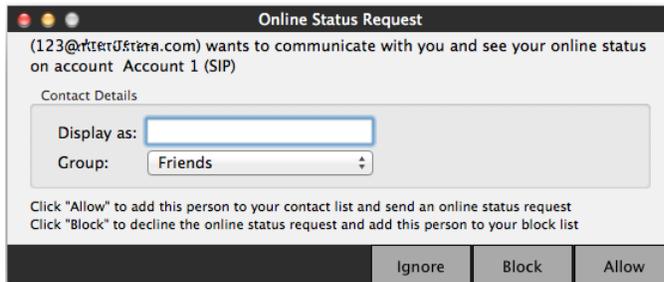

When you choose to share presence information, X-Lite sends the contact a notification request. The request asks that you be able to see that person's status. If the person allows this request, then the icon beside their name (in your Contacts) becomes color coded to specify their status.

Allowing Other Parties to See your Status (Publishing your Status)

Continuing from above, when the other person allows the notification request, your name is added to their contact list. As soon as you are added to their list, a request is sent back to you requesting that they be able to see you. X-Lite accepts this request automatically, and the other person can now see your status.

Receiving an Online Status Request

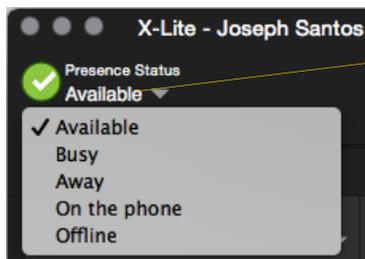

Someone who is not one of your contacts may add you as a contact on their end, and may include your SIP address. In this case, X-Lite receives an online status request.

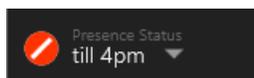

Setting your Online Status

Changing your Status

Click the down arrow beside the online status indicator on X-Lite, and select the desired online status. Along with a status, you can set a custom note by selecting and replacing the text such as “Available” or “Busy” beside the status icon.

Replace the text with your own note such as:

Setting up Online Status Indicators

Indicator	Meaning for your Status	Meaning for Others' Status
 Available	Either: <ul style="list-style-type: none"> You have set your status to this value. X-Lite has determined that you are logged on but not on the phone or idle. When you have this status, X-Lite will automatically detect when you are idle or on the phone, and change the status to match.	You can contact this person.
 Busy	You have set your status to this value. X-Lite will never automatically switch you out of this status; you must switch yourself.	You can contact this person.
 Away	You have set your status to this value. X-Lite will never automatically switch you out of this status; you must switch yourself.	You can contact this person.
 On the phone	Either: <ul style="list-style-type: none"> You have set your status to this value. In this case, X-Lite will never automatically switch you out of this status; you must switch yourself. You started a phone call when your status was “Available”. When your call finishes, your status reverts to “Available”. 	You can contact this person.
 Idle	You have not moved or clicked the mouse or pressed a keyboard key for the Idle period. To set the Idle period see page 38. As soon as you click the mouse or keyboard, your status changes to “Available”.	You can contact this person.
 Offline	You have set your status to this value. The other person sees you as offline, even though you are not actually offline. The other person cannot tell the difference between this status and you really being offline.	The contact is either not logged on or does not want to share online status.
No icon	Not applicable	You are not watching the other person's online status.

6 Using Other Resources

6.1 The History Tab

From the menu bar, choose
View > Show History

Status	Address	Date
Blue	Kolkila Perera	Today 4:31 PM
Red	Kolkila Perera	Today 4:30 PM
Green	Rita Santos	Today 4:26 PM
Red	Kolkila Perera	Today 3:22 PM
Green	Rita Santos	Today 3:15 PM
Green	6045551222	Today 12:18 PM
Green	1999	Today 12:14 PM
Red	6045551222	Today 12:08 PM
Green	1331	Today 11:49 AM
Green	1335	Today 11:45 AM

Blue: Incoming call that was answered

Red: Incoming missed call

Green: Outgoing call, either attempted or established

Managing the List of Calls

You can control-click on an entry in a list to:

- Delete the call.
- Delete all entries in this list.
- Edit the profile if the entry is a contact.
- Add as contact. The Contact dialog appears. See “Adding a Contact using an Existing Address” on page 21.

Phoning from History

You can control-click on an entry to place a call to this person, using the contact method that was used for this call. You can:

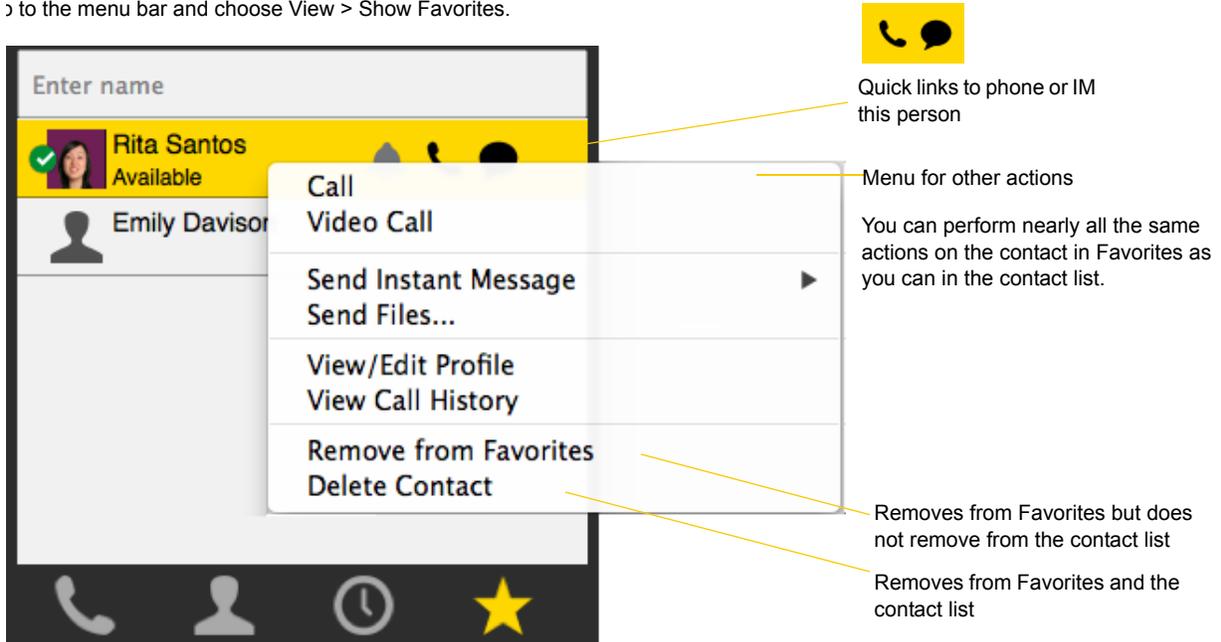

- Control-click on an entry and select Call or Video Call to place a call to this person, using the contact method that was used for this call.
- Place a call to this person and add them to a conference call that is in progress. For more information on conference calls, see page 14.

6.2 The Favorites Tab

You can create favorites from your contact list. They will be displayed in both the contact list and in the Favorites tab.

Select the desired contacts, then control-click and choose Add to Favorites.

to the menu bar and choose View > Show Favorites.

The screenshot shows a contact's Favorites tab. At the top, there is a search bar labeled "Enter name". Below it, two contacts are listed: Rita Santos (Available) and Emily Davison. A context menu is open over the "Remove from Favorites" option for Rita Santos. The menu items are: Call, Video Call, Send Instant Message, Send Files..., View/Edit Profile, View Call History, Remove from Favorites, and Delete Contact. A yellow star icon is visible in the bottom right corner of the Favorites tab. A yellow call and message icon is also present in the top right corner of the Favorites tab.

Quick links to phone or IM this person

Menu for other actions

You can perform nearly all the same actions on the contact in Favorites as you can in the contact list.

Removes from Favorites but does not remove from the contact list

Removes from Favorites and the contact list

7 Configuring X-Lite

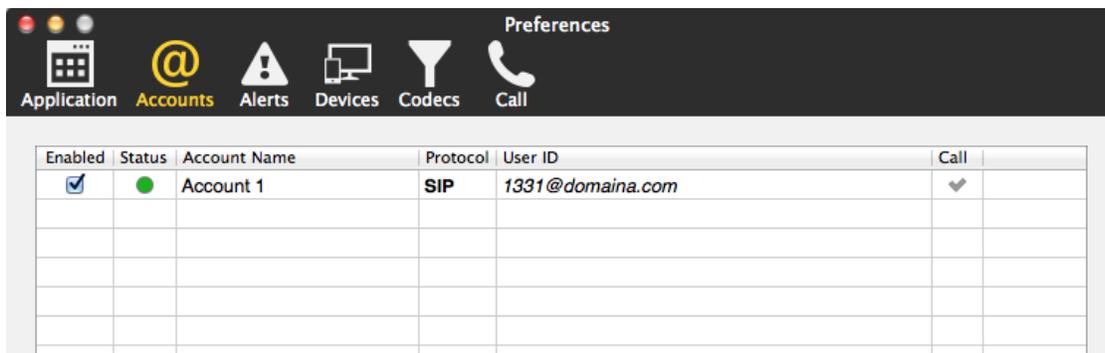

From the menu bar, choose X-Lite > Preferences. The Preferences window appears.

7.1 Account

Setting up an Account to Make Phone Calls

Choose X-Lite > Preferences and click the Accounts tab. Complete the tabs as described on the following pages.

When you click OK on any tab, the Account list reappears. The newly created account now appears in the list.

Account – General

Sip Account - Disabled

Account name:

Use for: Call
 IM/Presence

General | Voicemail | Topology | Presence | Transport | Advanced

User Details

* User ID

* Domain

Password

Display name

Authorization name

Domain Proxy

Register with domain and receive calls

Send outbound via:

Domain Proxy Address

Dial plan

Fields with an asterisk are required

Field	Description
Account name	If desired, change the account name to something that is meaningful to you. For example, the name of the VoIP service provider.
Protocol	Read-only. Always specifies SIP.
Use for Call	If checked, this account is eligible to be used for phone calls. If unchecked, this account will never be used for placing phone calls.
Use for IM/Presence	If checked, this account is eligible to be used for IM and online status (presence). If unchecked, this account will never be used for IM and online status.
User Details	
User ID	Typically the account number for the softphone account. For example, 6045551212 or 2766. Provided by your VoIP service provider.
Domain	For example, domainA.com. Provided by your VoIP service provider.
Password	Provided by your VoIP service provider.
Display name	This name is displayed in the X-Lite title bar. Other people will see you as this name.
Authorization name	May not be required. If it is required, it will be provided by your VoIP service provider.
Domain Proxy	
Register with domain and receive calls	Check this box if you want to register with your VoIP service provider, so that you can receive incoming calls. Typically, this field is checked. This field must be left unchecked when, for example, your level of service does not include the ability to receive incoming calls. In that case, turning this field on may cause registration to fail (when you close the Account Properties window).
Send outbound via	Choose the setting specified by your VoIP service provider: <ul style="list-style-type: none"> Domain: If your VoIP service provider requires that traffic be directed to proxies that are discovered via the domain. Proxy Address: If your VoIP service provider has an outbound proxy address and requires that you provide the address to X-Lite. For the address enter a domain name (for example, domain.com) or an IP address (for example, 123.456.789.012). If you are using X-Lite in a test lab, it is possible that neither of these settings is suitable; see page 37 for a third way to direct traffic.

Field	Description
Dial Plan	<p>Information about the syntax of the numbers used by this VoIP service provider.</p> <p>Provided by the service provider. The default plan is:</p> <pre>#1\a\a.T;match=1;prestrip=2;</pre> <p>For information on determining whether you need to modify the default dial plan, see page 50.</p>

Account – Voicemail

The screenshot shows the 'Sip Account - Enabled' configuration window. The 'Account name' field contains 'Account 1'. Under 'Use for:', both 'Call' and 'IM/Presence' are checked. The 'Voicemail' tab is selected, showing the following settings:

- Check for voicemail
- Number to dial for checking voicemail: []
- Number for sending calls to voicemail: []
- Send calls to voicemail if unanswered for 0 seconds

These settings let you set up to interact with your VoIP service provider's voicemail service.

Your service provider may provide the ability to set up for voicemail outside of X-Lite, for example, by phoning a softphone address and following the voice prompts, or by accessing a website.

Check with your service provider to determine if another setup mechanism is available. If so, check what the settings are in that setup, and make sure you enter compatible information in X-Lite.

Field	Description
Check for voicemail	<p>Set the checkbox in one of these ways:</p> <ul style="list-style-type: none"> • Check the box if X-Lite must subscribe to be notified when there is a voicemail for you. In other words, to configure for "subscribe for message waiting". • Clear the checkbox if the service provider's voicemail server sends notifications without X-Lite subscribing. In other words, to configure for "implicit subscription". • Clear the checkbox if the service provider does not support voicemail. <p>Check with your VoIP service provider for the correct configuration.</p> <p>Voicemail is offered by your VoIP service provider; it is not part of X-Lite. Contact your service provider for information on using voicemail.</p>
Number to dial for checking voicemail	<p>Optional, but complete this field only if your VoIP service includes voicemail.</p> <ul style="list-style-type: none"> • Completing this field activates the voicemail icon in the tool bar. When you click this icon, X-Lite will dial this number. You will be connected to your service provider's voicemail and can listen to your messages. • If you leave this field empty, then this icon will not work; you will have to manually dial this number in order to connect to voicemail. <p>Enter the number or SIP address provided by your VoIP service provider.</p>
Number for sending calls to voicemail	<p>Complete only if your VoIP service includes voicemail. Optional, but you must complete it if you check "Send calls to voicemail if unanswered".</p> <p>This is the number that incoming calls will be forwarded to if they are unanswered after the specified interval (below).</p> <p>If you leave this field empty, then X-Lite will never forward calls to your service providers' voicemail. However, most VoIP service providers have their own mechanism for sending unanswered phone calls to voicemail. So leaving this field blank does not mean that forward-to-voicemail does not work.</p> <p>Enter the number provided by your VoIP service provider.</p>

Field	Description
Send calls to voicemail if unanswered	<p>Complete only if your VoIP service includes voicemail.</p> <p>To send to voicemail after the specified number of seconds.</p> <p>Your service provider may also provide a similar feature that is set up outside of X-Lite. If so, make sure you do not enter competing information in X-Lite and in the service provider's user interface. For example, if you turn off this field, make sure the same feature at your service provider is also turned off. Otherwise, all your calls will continue to be forwarded.</p>

Account – Presence

Sip Account - Enabled

Account name:

Use for: Call
 IM/Presence

General Voicemail Topology **Presence** Transport Advanced

Presence

Mode

Refresh interval seconds

Presence allows other softphone users to see your online status, and also allows you to see the online status of others.

This tab lets you set up to share presence information with contacts.

Field	Description
Mode	Peer-to-Peer is supported.
Refresh interval	Enter the value specified by your VoIP service provider.

Account – Transport

Sip Account - Enabled

Account name:

Use for: Call
 IM/Presence

General Voicemail Topology Presence **Transport** Advanced

Transport

Signaling transport Automatic
 TCP
 UDP

Field	Description
Signaling Transport	<p>Contact your VoIP service provider to identify the types of transport that are supported. Then choose a supported transport:</p> <ul style="list-style-type: none"> • Automatic: X-Lite sets up the transport based on the capabilities of the network and the X-Lite computer. Choose this option if you do not care which transport is used. • TCP • UDP

Account – Advanced

Account name:

Use for: Call

Register Settings

Reregister every seconds
 Minimum time seconds
 Maximum time seconds

Timers

Enable Session Timers
 Session Timer Preference
 Default Session Time seconds

Advanced Options

Send SIP keep-alives Use old style hold
 Use rport Send outgoing request directly to target

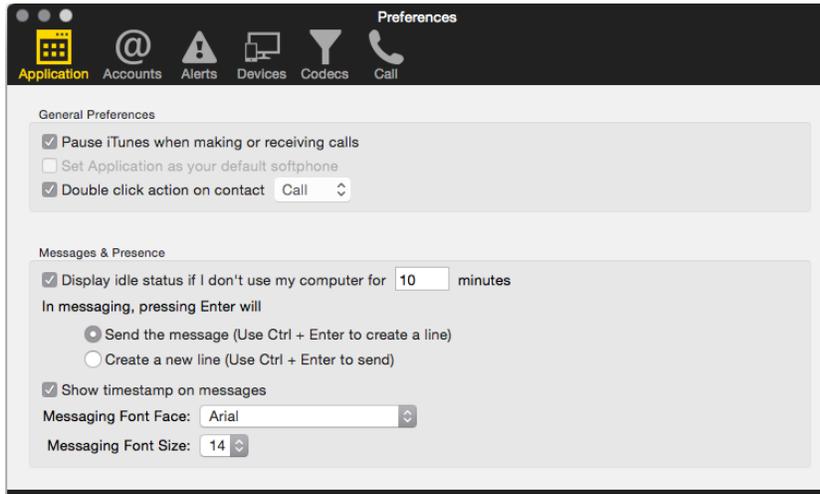

Field	Description
Register Settings	
Reregister every	The time interval between X-Lite's attempts to reregister in order to refresh the account registration with the VoIP service provider for this account. A value of zero means not to reregister after the initial registration. This value is placed in the "Expires" header field of the REGISTER message.
Minimum time	If the reregistration fails, X-Lite will wait this amount of time, then attempt to reregister. If the second attempt fails, X-Lite will wait twice this time and try again, then four times this time, and so on, until reregistration succeeds.
Maximum time	In this version of X-Lite, this setting has no effect.
Timers	
Enable session timers Default session time	A session timer is a mechanism to detect whether a call session is still active from the signaling point of view. When the timer expires, a refresh is sent from one party to the other. The timer is then reset. <ul style="list-style-type: none"> Turn on to enable session timer. Enter a value in Default session time. Turn off to disable session timer; refreshes will never be sent.
Session timer preference	<ul style="list-style-type: none"> Inactive: A session timer will be used only when it is explicitly required by the remote party. Optional: A session timer will be used whenever the remote party supports and uses it. Required: A session timer will be a requirement for the remote party to be able to establish a call session. Always: A session timer will always be used in all sessions, regardless of whether or not the remote party supports/uses it.
Send SIP keep-alives	Typically on, to instruct X-Lite to send SIP keep-alive messages in order to maintain a "pinhole" through your firewall for SIP messaging.
Use rport	Typically on.
Send outgoing request directly to target	In this version of X-Lite, this setting has no effect.
Use old style hold	Check this box only if your VoIP service provider advises you to do so.

7.2 General Preferences

From the menu bar, choose X-Lite > Preferences. The Preferences window appears. All the tabs on this window except for “Accounts” are preferences tabs. These tabs let you control the way that you work with X-Lite.

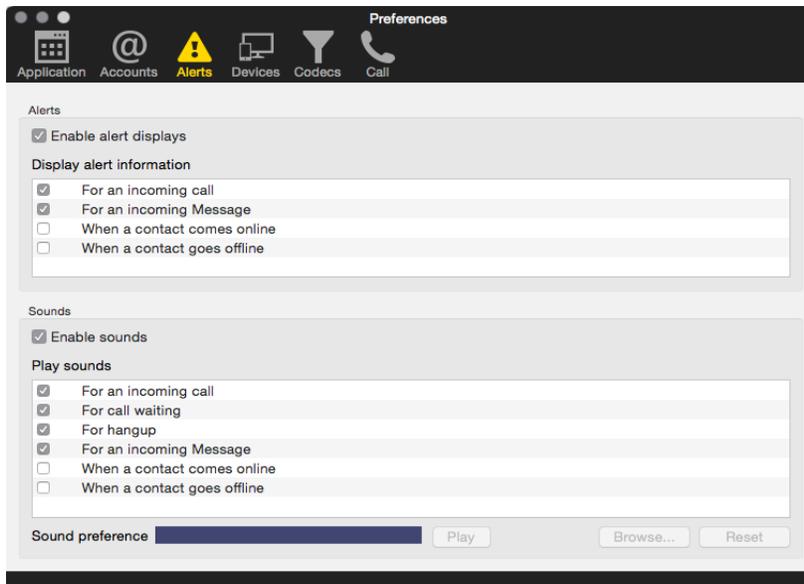

The icons (other than Accounts) let you set up general features of X-Lite.

Preferences – Application

This panel lets you set your preferences for general UI behavior.

Preferences – Alerts & Sounds

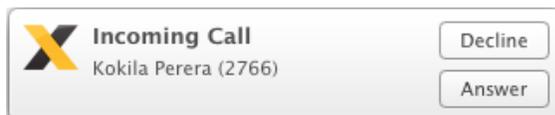

This panel lets you control the alert box and lets you assign sounds.

Enable Alert Displays

You can control whether notifications are displayed in different situations. To receive notifications:

1. Set up to use either Banners or Alerts under OS's system preferences (page 4). When "Enable alert displays" is on, X-Lite shows either a banner or an alert for selected situations.
2. On the Alerts tab, check the situations for which you want to receive an alert.
 - With "For an incoming Message", if you check this option, an alert or banner (as specified in the OS) will appear when you have an IM. If you uncheck this option, the Messages window will appear when you have an IM.
 - With other situations, if you check the option, an alert or banner will appear. If you uncheck the option, no alert or banner will appear.

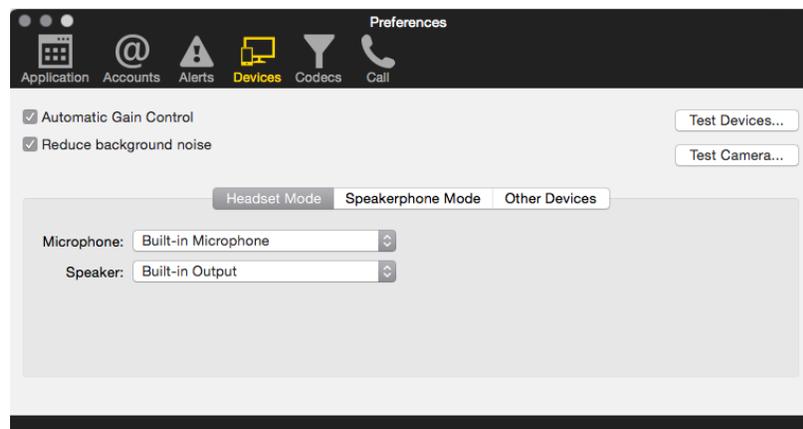

Assigning Sounds

You can assign specific sounds to a variety of actions or "events".

1. Select the Enable sounds check box and select the check boxes for each desired event, or clear the Enable sounds check box to disable all sounds.
2. If enabling sounds, you can change the sound for each event: select the individual event. The value in Sound preference will change. Select the desired sound.

You can import sounds; these will be added to the list of sounds you can choose from when assigning a sound to an event.

Preferences – Devices

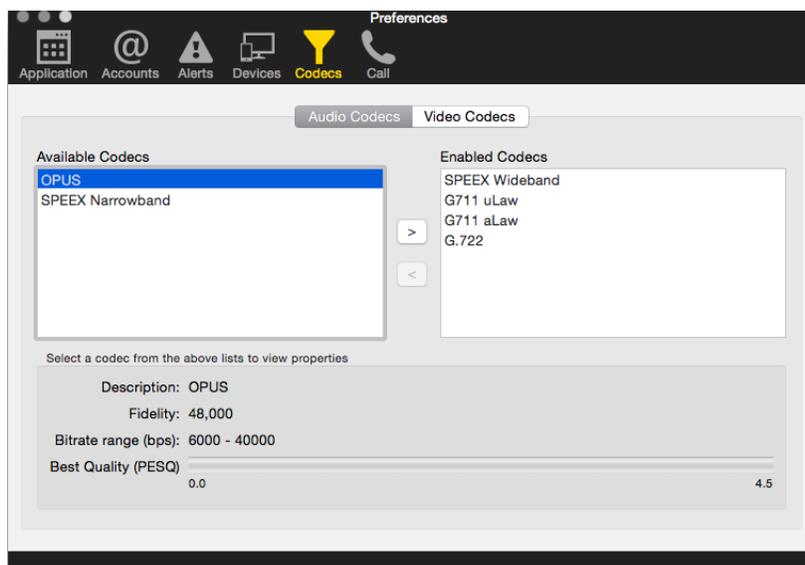

X-Lite automatically detects devices at each startup. On this panel, you can choose the device to use for X-Lite.

Field	Description
Automatic gain control	This feature is typically on.
Reduce background noise	Automatically attempts to remove background noise. Typically on for the speakerphone.
Test Devices	For information on the Test Devices button, see “Troubleshooting” on page 45.
Test Camera	You can verify that your camera is working and adjust settings.
Headset Mode	
Microphone, Speaker	Change these fields only if you want to override the devices that X-Lite automatically selected. In both these fields, select the headset you are using. The headset is the device that is usually used for the speaker (the sound you hear) and microphone (recording your voice). The only situation in which the headset is not used is when the Speaker Phone button on the dialpad is pressed. Therefore, unless you will always be using X-Lite in speakerphone mode, you must make a selection here. Select the headset in both the Speaker device field and Microphone device field.
Speakerphone Mode	
Microphone Speaker	Same as headset mode, but for the device to use when speakerphone is one (on the toolbar). Select None if you do not have a speaker phone. The Speaker Phone button on the dialpad will be disabled. You can set different devices for the speaker and microphone: for example, you can set the speaker to the speakerphone and set the microphone to your headset.
Reduce echo	Turning this feature on improves sound quality. This feature is typically on.
Other Devices	
Ring on	The device where you want to hear the phone ringing. Change this field only if you want to override the devices that X-Lite automatically selected.
Camera	This field appears only on versions of X-Lite that include video functionality. Change this field only if you want to override the devices that X-Lite automatically selected. Select the camera model.

Field	Description
Max Resolution	<p>Leave at standard, or change the size as follows:</p> <ul style="list-style-type: none">• Set it to high if you have a good camera and a computer with a fast CPU. You will know that you have set the size too large if: Your computer slows down (the video is using too much CPU) The video shows black areas or is slow or jerky.• Typically set it to low only in special situations, for example, when using wi-fi in a hotel. You will know that you have set the size too small if the video is fuzzy.

Preferences – Codecs

Audio Codecs

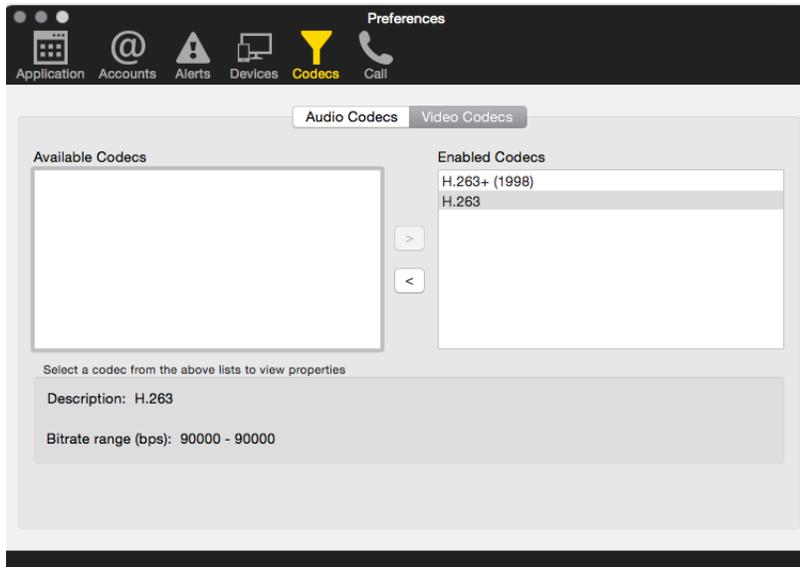

This panel shows all the audio codecs that are included in X-Lite. You can enable or disable codecs as desired.

Typically, leave the enabled codecs list at its default state; only enable or disable a codec if advised to do so by your VoIP service provider.

With only one codec enabled, all calls made will use that codec. With more than one codec enabled, X-Lite offers all the enabled codecs and negotiates a common codec with the other party.

You cannot change the properties of any codecs.

Video Codecs

This panel shows all the video codecs that are included in X-Lite. You can enable or disable codecs as desired.

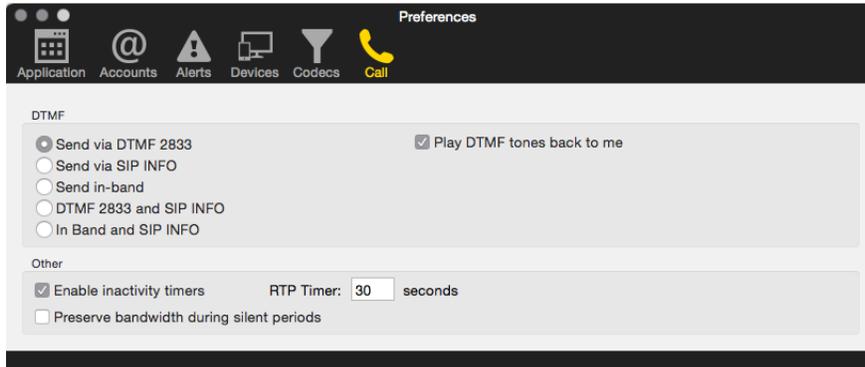

Typically, leave the enabled codecs list at its default state; only enable or disable a codec if advised to do so by your VoIP service provider.

With only one codec enabled, all calls made will use that particular compression format. With more than one codec enabled, X-Lite offers all the enabled codecs and negotiates a common codec with the other party.

You cannot change the properties of any codecs.

Preferences – Calls

These settings let you configure how you want auto answer to handle incoming calls, when Auto Answer is enabled. (To enable Auto Answer, see page 11).

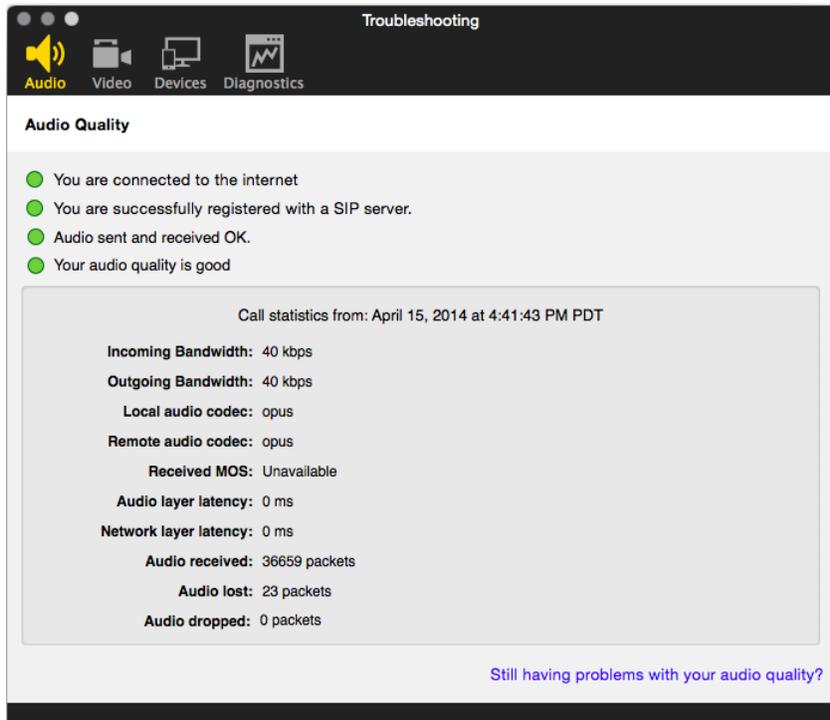

Field	Description
DTMF	You may need to change the DTMF configuration if you cannot interact with interactive voice response systems (auto attendants, voice-activated menus, and so on). Contact your VoIP service provider for the correct setting.
RTP	This timer controls how calls are disconnected when X-Lite determines that there is a problem with the call and the other party has probably disappeared (assuming that you have not yourself detected the problem and hung up manually). Typically, the timer is enabled. It is recommended that you not disable it. You can change the length of the timer, but do not set it to less than 30 seconds.
Preserve bandwidth	When this feature is on, X-Lite stops sending audio when you are not talking. When this feature is off, X-Lite always sends audio, which uses more bandwidth but may result in better call quality. Typically off. However, if you are using a slow (dial-up or ISDN) connection, you may want to turn it on.

A Troubleshooting

From the menu bar, choose Help > Troubleshooting. The Troubleshooting window appears.

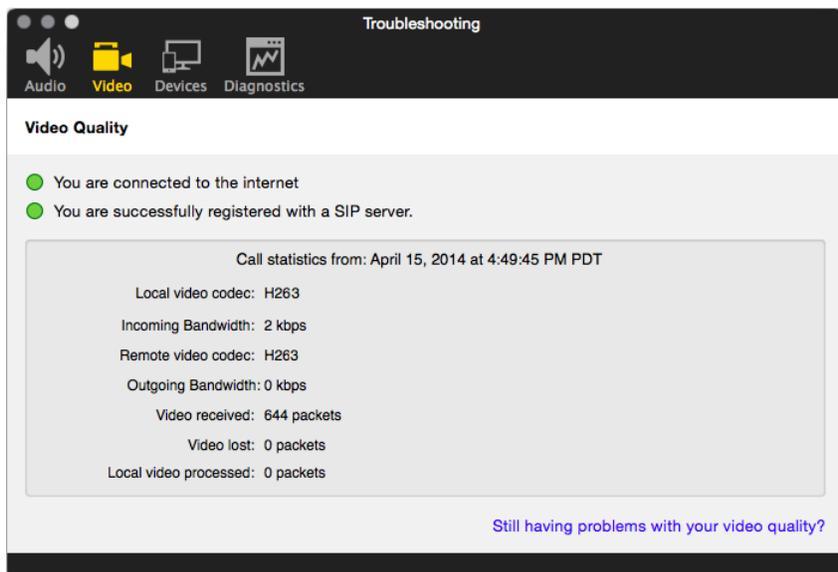

Testing Audio Quality

While you are on a phone call, you can test the quality of the audio. Note that to perform a valid test, you should be on an established call (not a call attempt).

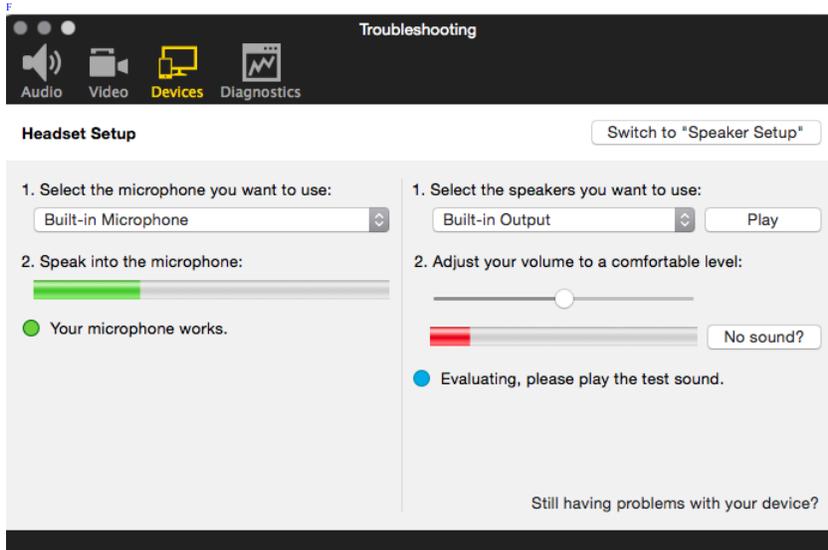

Testing Video Quality

While you are on a phone call, you can test the quality of the video. Note that to perform a valid test, you should be on an established call (not a call attempt).

Testing Audio Devices

You can verify that your microphone and speakers are working and can set the volume to a comfortable level without having to actually place a phone call.

Diagnostics

If you have contacted CounterPath Customer Support in order to troubleshoot a problem, you may be asked to generate a diagnostic log and send it to CounterPath.

Click — For support information go to [CounterPath support FAQ](#), or you can send us a log report and we can try and help. Click on Advanced Logging when collaborating with CounterPath Support.

Select the problem you are experiencing —

- Starting the application
- Phone calls and Audio
 - I am not getting incoming calls
 - I can't make outgoing calls**
 - My calls get dropped
 - Audio is lost
 - I am experiencing one way audio
 - Audio quality is poor
 - Another problem
- Device
- Conferencing

Click — Start Advanced Logging | Send Advanced Logging | Close

Click — Try repeating the actions that caused the problem then return to Advanced Logging screen and Click Send Advanced Report.
Log files may contain personally identifiable information, but these files will be used only to help diagnose and resolve issues and no other purposes.
It is recommended that you Stop Advanced Logging after you have sent the report.

Perform the actions you want to capture

When done, click Advanced again to open the dialog.

Click to stop logging —

Then click to choose a log file to send.

The report is sent. Close this window — Your diagnostic log report has been sent.

B Application Hot Keys

Category	Function	Keyboard Shortcut
Making or answering a call	Answer an incoming call	Ctrl + N
	Decline an incoming call	Ctrl + D
	Place an audio call	Ctrl + P
	Redial the last dialed number	Ctrl + R or Ctrl + R then Enter
	End the call End the conference call (hang up on all participants)	Ctrl + E
During a call	Mute your voice during a call	Ctrl + M
	Hold or resume the call when the focus is on this call panel	Ctrl + H
Opening a window	Open the Messages window	Shift + Apple key + M
	Open the Preferences window	Apple key + , (comma)
	Open the Test Devices window	Ctrl + 9
	Open the Video window	Shift + Apple key + V
Hiding	Hide X-Lite	Apple key + H
Exiting	Quit X-Lite	Apple key + Q

C Dial Plan

When a call attempt is made, the call input (what you type or select in the call entry field) can be modified to ensure that the call gets placed successfully. This ability to modify the input relies on the existence of a “dial plan” for the account.

C.1 Dial Plan Syntax

The dial plan has the following syntax:

```
pattern[ |pattern];match=1;<transformation>=<value>;[match=2;
<transformation>=<value>;]
```

Where:

- Items in [] are optional.
- Pattern: the pattern that will be matched. One or more patterns. Each pattern is separated by a | pipe. The pipe is optional after the last pattern. Each pattern is implicitly numbered, starting from 1.
- Match; Transformation: A pair that identifies the pattern number to compare with the input, and the transformation to perform on the input when a match is obtained. The transformation is optional (meaning that if there is no transformation for a pattern, then the input that matches this pattern is not transformed). One or more pairs.

“match=” is a literal. “n” identifies the pattern. “transformation=” is replaced by a keyword, see below. “value” is replaced by a value.

Spaces are allowed only in the <value> items.

Remember that dial plans are applied after the input has been cleaned up!

Example

```
\a\a.T|xxxxxxxxxx;match=1;prestrip=2;match=2;pre=8;
```

where:

- \a\a.T is the first pattern.
- xxxxxxxxxxxx; is the second pattern.
- match=1;prestrip=2; is the first match-transformation pair.
- match=2;pre=8; is the second match-transformation pair.

Pattern

Valid Content

The content for a pattern follows the digit map rules of RFC 2705, supplemented by the rules for regular expressions. Where there is an overlap between the digit map and regular expression rules, the digit map rules apply. For this reason, there are some special cases, included in the table below.

The following table describes the most common elements. All regular expression elements are supported.

Element	Origin	Description
	Regular expression rules	Pipe character, used to separate patterns.
0 1 2 3 4 5 6 7 8 9	Literals	Literal digits, used as is.
# * a to z	Literals	Literal characters, used as is. Special cases: <ul style="list-style-type: none"> The literal x character is represented by \x. The literal t character is represented by \t.
x	Digit map rules	Wildcard for any single digit, 0 to 9.
\a	Regular expression rules	Wildcard for any single alphanumeric character.
[digit-digit]	Regular expression rules	A digit within the specified range.
[character-character]	Regular expression rules	A character within the specified range.
[digit1, digit2, digit3]	Regular expression rules	One of the characters in the collection.
.	Digit map rules	Repeat the last element 0 or more times. For example, xxxx. means repeat the last x 0 or more times, which means this pattern matches three or more digits (not four or more digits)! Use of this element results in a pattern with “minimum requirements”.
T	Digit map rules	A timeout period will take place before automatic dialing starts. The T timer forces X-Lite to wait after a match is made. This timer should always be included in these situations: <ul style="list-style-type: none"> Any pattern that uses the . (dot). For example, if the pattern is xxxx. then adding a timer lets you type three or more digits. If there is no timer, then as soon as you type three digits, X-Lite makes the match as soon as you type three digits. Any dial plan that has two patterns that are similar in elements but different in length. For example, if one pattern is xxx and the other pattern is xxxxxxx, then adding the timer lets you continue typing past three digits, in order to get a match on the second pattern. In this situation, the T timer should be included in the shorter pattern.

Transformation Keywords

Keyword	Description
prestrip	Strip the first n characters from the input before placing the call.
poststrip	Remove n number of characters from the end of the input before placing the call.
pre	Add the specified account prefix to the input before placing the call.
post	Attach the specified postfix to the input before placing the call.
replace	Replaces the input with the specified string before placing the call.

Order of Transformations

These transformations are always performed in the following order (the order in which the transformations are entered in the dial plan is not significant):

prestrip > poststrip > pre > post > replace

C.2 How the Input Is Processed

Comparing Input to the Dial Plan Patterns

The input is compared to the dial plan. Keep in mind that the input being compared is different depending on whether the input is dragged/selected or typed:

- If the input is dragged or selected, then the entire input is compared to the dial plan.
- If you are typing the input, then the digits are compared one by one as they are entered. Each time a new digit is entered, the comparison starts over.

Results of the Comparison

X-Lite finds a match according to the following rules.

Type of Match	Result If User Presses Enter or Call	Result if User Stops typing
The input matches the pattern and the pattern does not include the T timer	The transformation is performed. X-Lite attempts the call.	Nothing happens even after the T timer has expired.
The input matches the pattern and the pattern includes the T timer	The transformation is performed. X-Lite attempts the call.	The transformation is performed. X-Lite attempts the call.
The input does not match the pattern	No transformation is performed. X-Lite attempts the call.	Nothing happens even after the T timer has expired.

C.3 Examples

Example 1

```
\a\a.T|xxxxxxx.T;match=2;pre="9"
```

This simple example shows how to differentiate between a PSTN number and a softphone address, and how to add a “9” dialing prefix only to the PSTN number.

Example 2

```
3xxT|1xxxxxxxxxx|[2-9]xxxxxxxxxx|+x.T;match=2;pre="9";  
match=3;pre="91";match=4;prestrip=1;pre="9011"
```

3xxT	The first pattern is any three-digit number beginning with 3. No transformation. The assumption is that this is an internal extension. The timer forces X-Lite to wait after detecting a three-digit number beginning with 3, in case you are actually dialing a local call starting with 3.
1xxxxxxxxxx	The second pattern is any eleven-digit number beginning with 1. Prefix with 9 and dial as is. The assumption is that this is a long-distance PSTN call within North America (within North America, all long-distance calls start with 1).

<code>[2-9]xxxxxxxxxx</code>	The third pattern is any ten-digit number beginning with a number other than 1. The assumption is that this is a local PSTN call within a ten-digit dialing zone.
<code>+x.T;</code>	The fourth pattern is a number of any length that begins with +, to indicate an international PSTN call from North America. Delete the +, prefix with 9011 (011 is the number to access an international line from North America).
<code>match=2;pre="9";</code>	For the second pattern, prefix 9 to access an outside line.
<code>match=3;pre="91";</code>	For the third pattern, prefix 9 and 1 to access an outside line and enter the long-distance code.
<code>match=4;prestrip=1; pre="9011"</code>	For the fourth pattern, remove the + and prefix 9011 to access an outside line and enter the international code.

D Exporting Contacts

You can export a contact list to a comma-separated file.

1. From the menu bar, choose Contacts > Export Contacts. The Export Contacts wizard starts.
2. Select the file type and file location for the created file.

A file of the specified type is created.

E Glossary

Broadband	Broad or wide bandwidth. In data transmission, the wider the band, the more data it is possible to transmit in a given time span. A cable, DSL and ADSL connection to the network provide broadband for data transmission. A dialup or ISDN connection typically provide a narrow bandwidth for data transmission.
Codec	The format by which audio or video streams are compressed for transmission over networks. Codecs can be categorized as either narrowband or wideband: Narrowband codecs work with low bandwidth such as a dialup internet connection. These codecs have a sampling rate of 8 kHz. Wideband codecs work with high bandwidths and result in better audio quality. However, they do not work with PSTN. These codecs have a sampling rate of 16 kHz.
Dial plan	The rules that X-Lite follows in order to interpret the softphone address or phone number that the user has entered and to modify the number or address, as required, to ensure that the call will be placed successfully.
DTMF	Dual-tone multi frequency. DTMF is the system that is used in interactive voice-response menu systems such as the menu system for accessing voicemail messages. The DTMF system allows the user to interact with the menu by pressing keys on a dialpad or keyboard.
Firewall	A technology that prevents unauthorized people connecting to your computer and to the applications running on the computer.
IM	Instant Messaging. A technology that lets users send text message and files for near instantaneous delivery and display on each others' computers.
MWI	Message Waiting Indicator. An indicator that there is a voicemail message for the owner of an account.
Narrowband	In data transmission, the wider the band, the more data it is possible to transmit in a given time span. A cable, DSL and ADSL connection to the network provide broadband for data transmission. A dialup or ISDN connection typically provide a narrow bandwidth for data transmission.
Presence	An instant messaging feature that allows users to share information about their online status.
PSTN	Public Switch Telephone Network. The traditional land-line phone network.
SIP account	An account that provides the user the ability to make VoIP phone calls. The account encapsulates the rules and functions the user can access.
Softphone address	The address used to connect to a SIP endpoint. In other words, the "phone number" used in a VoIP phone call. For example, sip:joseph@domainA.com.
USB device	Universal Serial Bus device. A device that follows a specific communications VoIP Voice over Internet Protocol. A variation of IP used for sending voice data over the internet, in other words, used for making phone calls over the internet.
VoIP service provider	A business that provides a VoIP service, allowing a user to connect to the internet in order to make VoIP phone calls using X-Lite. The VoIP service provider sets up a SIP account for the user.
